SUMMARY

AI Technical Program Manager with 10+ years of experience delivering cloud migration, infrastructure modernization, and AI-driven transformation initiatives across telecom, insurance, and enterprise environments. Proven success managing $5M global programs, leading cross-functional engineers across multi-region deployments, and driving measurable operational improvements including 20%+ cost optimization and 30% schedule acceleration. Hands-on builder of Retrieval-Augmented Generation (RAG) systems, hybrid AI forecasting models, and secure local LLM architectures using Python, LangChain, LangGraph, TensorFlow, and vector databases. Strong governance mindset with focus on risk mitigation, delivery assurance, and scalable AI adoption.

CORE SKILLS

AI & GenAI: RAG Architecture, Vector Databases (ChromaDB), Prompt Engineering, LLM Orchestration, LangChain, LangGraph, Ollama (Local LLM), GPT / Gemini / Claude / GLM Models, ML Lifecycle, Model Evaluation (Accuracy, Precision, Recall, F1), Bias Mitigation, Responsible AI Principles
Programming: Python (Pandas, NumPy, Scikit-learn, TensorFlow, Streamlit), SQL, Bash
Cloud & Infrastructure: AWS (EC2, S3, IAM, VPC, CloudWatch, CloudEndure), Azure (VMs, Storage, NSG), VMware vSphere, Linux (RHEL, SLES, CentOS), High Availability (HA), Disaster Recovery (DR)
Program Governance: PMBOK, Agile/Scrum, DXC Catalyst, MS Project, WBS, Critical Path, RAID Logs, Budgeting, Forecasting, Change Management, Executive Reporting, Governance & Compliance
Analytics & Tools: Power BI, Advanced Excel, Git, JIRA, Confluence, Reporting Automation

PROFESSIONAL EXPERIENCE

Community Dreams Foundation *Remote (USA) | Dec 2025 – Present*
Project Manager | GroundedAI

- Designed and implemented a production-grade local Retrieval-Augmented Generation (RAG) application using Ollama and ChromaDB to enable secure offline document-based Q&A with strict grounding and citation enforcement.
- Architected modular AI pipelines (PDF ingestion → chunking → embeddings → vector indexing → LLM orchestration), reducing manual document review time by approximately 60%.
- Developed hybrid AI Restock Prediction Model combining deterministic ETS forecasting with LLM-based prioritization under budget constraints, improving decision precision by ~25% and minimizing overstock risk.
- Built Streamlit dashboards visualizing model accuracy, vendor budgets, and KPI metrics to support executive-level review.
- Established evaluation framework including accuracy validation, strict refusal logic, hallucination controls, & evidence tracking.
- Managed full AI lifecycle from requirements definition to architecture design, experimentation, validation, and deployment readiness.

Savvy Global Technologies *Remote (USA) | July 2025 – Nov 2025*
Technical Project Manager | AI Innovation Program

- Led cross-functional AI teams (analysts, data scientists, engineers) managing ML lifecycle activities including data preprocessing, feature engineering, experimentation, evaluation, and validation.

- Accelerated AI delivery timelines by 20% through sprint restructuring, backlog optimization, and dependency management.
- Delivered executive dashboards translating model outputs into actionable insights for leadership.
- Documented governance, bias mitigation, and validation frameworks ensuring audit readiness.

DXC Technology (EIT Services India Pvt Ltd) *India | Feb 2020 – Dec 2023*

Technical Project Manager | Cloud & Infrastructure Programs

- Directed multi-wave AWS/Azure cloud migrations (4,000+ servers) with 0% downtime, managing $2M–$5M budgets.
- Led multiple global engineers across discovery, migration, validation, and cutover phases.
- Reduced schedule delays by 30% through structured RAID governance and risk mitigation planning.
- Achieved 20% infrastructure cost optimization via migration sequencing and footprint rationalization.
- Automated infrastructure discovery processes (UD, PMATT, ADEPT), reducing manual workload by 70%.
- Built executive Power BI dashboards cutting reporting cycle time by 60%.
- Standardized migration playbooks improving repeatability and operational consistency.

ADECCO Global *India | May 2019 – Jan 2020*

Sr. Linux Migration Engineer **|** HPI Tattoo Beyond Migration

- Led enterprise Linux migrations using VMware and replication tools, ensuring zero downtime for critical workloads.
- Improved deployment reliability by 30% through structured validation, rollback planning, and automation scripting.

Ericsson India Global Services *India | Jun 2017 – Nov 2018*

Solution Integrator | T-Mobile SDG Platform

- Managed UAT cycles, platform upgrades, and SSL/TLS hardening reducing production incidents by 25%.
- Strengthened system stability through proactive validation and performance optimization.

Huawei Technologies India *India | Oct 2016 – May 2017*

Sr. Technical Engineer | MTN SA Service Delivery Platform

- Led high-availability deployments and performance validation for telecom platforms.
- Improved release quality via early defect detection and cross-functional collaboration.

Tata Teleservices Ltd *India | Jun 2013 – Oct 2016*

Technical Engineer | TATA SDP, Device Management & DSTK Platform

- Managed SDP platforms, SLA monitoring, and system integrations.
- Increased reliability by 40% and reduced manual operational effort by 50% through shell automation.

EDUCATION

Stevens Institute of Technology, Hoboken, NJ **– *M.S in Information Systems*** (Jan 2024 – May 2025), GPA: 3.9/4.0

Aditya Engineering College, JNTUK – ***B.S in Electronics & Communication Engineering*** (May 2013)

CERTIFICATIONS

Certified Scrum Master (Scrum Alliance) | SAFe SSM | Microsoft AZ-900 | Oracle OCI Foundations

KEY AWARDS & LEADERSHIP

- Excellence in program delivery, innovation, and engineering performance across large-scale technology initiatives.
